ics.uci** - the tcp client at argon asks ip, the internet protocol, to deliver the connection request to ip address 128.143.71.21. ip takes the connection request, encapsulates it in an ip datagram (an ip datagram is the name of a packet in the internet protocol), and delivers the ip datagram to neon. **transport and network layer protocols lab tcp/ip** - tcp/ip lab version 1.3, february 2004 - 10 - part ii: transmission control protocol (tcp) objective: the objective of this lab is to have you explore the characteristics of the transport layer protocol tcp and its mechanism to deal with congestion. you should see the 3-way handshake (synchronization) when a connection is set up. **security problems in the tcp/ip protocol suite** -
